

BOA FIT SYSTEM

WHAT IS THE BOA® SYSTEM?

KNOB

By turning the knob, the cord winds around the reel for a perfect fit, again and again.

ELONGATED LACE GUIDES

The low-friction elongated lace guides ensure an even distribution of the closure force.

LACES (49 STRANDS)

7 strands of aircraft-grade stainless steel wire are woven together into small bundles. The seven bundles are heat-treated and drawn to form a smooth, flexible, tangle-resistant cable.
